

Viracare

HELPING PROVIDE A SAFE
AND HEALTHY PLACE FOR
YOU TO SLEEP

Viral Protection

Our Viralcare treatment combines the natural antiviral and antibacterial properties of silver particles with advanced fatty spherical vesicle technology to help prevent the contamination and transmission of viruses and bacteria that use textiles as a hosting surface.

Viralcare Highlights

- ✓ OEKO-TEX® and Bluesign® approved
- ✓ Tested antiviral efficacy
- ✓ Kills bacteria and destroys viruses in minutes
- ✓ Minimizes the potential for pathogen retransmission on textiles
- ✓ Effective against influenza and coronavirus

How it works

The vesicle technology of our viral protection actively inhibits viruses upon contact by depleting the viral membrane of their cholesterol content. By rapidly causing structural damage to the surface protein of a virus, our treatment offers effective protection against common harmful viruses such as influenza and coronavirus.

The high surface area to volume ratio and unique chemical properties of the potent antibacterial and antiviral agents of Viralcare helps keep textiles free of microorganisms so you, and your customer, can rest assured you are sleeping in a healthy environment.
